## Short guidance on use of this catalog

- Verification:** Use these ranges for planning — verify spot prices on mandi platforms (APMCs), spice board, and trade portals before purchase contracts.
- Organic vs Conventional:** Organic labeled lines are indicative; certified organic often needs separate sourcing and premium pricing (20-80% premium depending on crop).

3. **Packaging & GRAS compliance:** For food exports ensure FSSAI standards, ISO/HACCP/GMP and target country MRL/Pesticide limits. Some importers require lab reports for contaminants (ethylene oxide, pesticides).
  4. **Targeting buyers:** B2B (food processors, spice packers, nutraceutical manufacturers) buy bulk (25–50kg polybags/IBC). B2C needs consumer-grade packaging (50–500g retail pouches) and branding.
  5. **Shelf life & storage:** Most powders require moisture-free packaging, oxygen absorbers, and shelf-life testing (6–24 months depending on product).
